MAIL DATE

DELIVERY MODE

07/30/2007

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/802,388

Applicant(s)

HERNANDEZ ET AL.

Examiner

George C. Monikang

Art Unit

2615

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 3/17/2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 3/18/2005
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4-6 & 8-36 are rejected under 35 U.S.C. 102(b) as being anticipated by Raviv, US Patent 5,444,786. (This reference is cited in IDS filed 3/18/2005)

Re Claim 1, Raviv discloses a system for sound cancellation comprising: a source microphone for detecting sound (col. 3, lines 58-62); a speaker for broadcasting a canceling sound with respect to a cancellation location (col. 3, lines 62-65), and a computational module in communication with the microphone and the speaker (col. 3, line 66 through col. 4, line 9), the computational module configured to receive a signal from the microphone (col. 3, line 66 through col. 4, line 9), identify a cancellation signal using a predetermined adaptive filtering function responsive to an acoustic environment of the cancellation location (col. 3, lines 49-57), and transmit a cancellation signal to the speaker (fig. 1: 25 & 32; col. 3, lines 49-57).

Re Claim 2, Raviv discloses the system of claim 1, further comprising a training sub-system having at least one training microphone that can be placed at the cancellation location (col. 4, lines 53-59).

Re Claim 4, Raviv discloses the system of claim 2, wherein the predetermined adaptive filtering function is determined by receiving a first sound input from the source

Art Unit: 2615

microphone (col. 3, lines 58-62), receiving a second sound input from the training microphone (col. 4, lines 53-59), and then determining the adaptive filtering function (col. 3, lines 49-57), wherein the predetermined adaptive filtering function is adaptive to a sound transformation between the source microphone signal and the training microphone signal (col. 3, lines 49-57; col. 4, lines 53-59).

Re Claim 5, Raviv discloses the system of claim 1, wherein the predetermined adaptive filtering function comprises a function that identifies a sound transformation between the source microphone and the cancellation location without contemporaneous sound input at the cancellation location (col. 6, lines 29-35).

Re Claim 6, Raviv discloses the system of claim 4, wherein the cancellation location is spatially removed from the source microphone and speaker (col. 3, lines 58-65).

Re Claim 8, Raviv discloses the system of claim 1, further comprising at least one locating sensor (col. 4, lines 5-9).

Re Claim 9, Raviv discloses the system of claim 8, wherein the locating sensor is configured to determine a location of a subject (col. 4, lines 5-9).

Re Claim 10, Raviv discloses the system of claim 9, wherein the predetermined adaptive filtering function determines an approximate sound transformation as a function of the location of the subject (col. 3, lines 42-57).

Re Claim 11, Raviv discloses the system of claim 8, wherein the locating sensor is configured to determine a location of a sound source (col. 4, lines 5-9).

Re Claim 12, Raviv discloses the system of claim 11, wherein the adaptive filtering function determines an approximate sound transformation at a cancellation location based on the location of the sound source (col. 3, lines 42-57).

Re Claim 13, Raviv discloses the system of claim 8, further comprising at least one locating sensor configured to determine a location of a sound source (col. 4, lines 5-9), wherein the adaptive filtering function comprises a function that determines an approximate sound transformation at the location of the subject based on the location of the sound source (col. 3, lines 31-37; col. 3, lines 42-57).

Re Claim 14, Raviv discloses the system of claim 1, wherein the speaker is a parametric speaker for broadcasting ultrasonic sound (col. 10, line 56 through col. 11, line 6), the parametric speaker configured to broadcast a localized cancellation sound at the cancellation location (col. 3, lines 62-65).

Re Claim 15, Raviv discloses the system of claim 1, wherein the speaker comprises a plurality of speakers (col. 3, lines 42-48).

Re Claim 16, Raviv discloses the system of claim 1, wherein the computational module further comprises a screening module that can analyze signals from the source microphone for indications of a health condition comprising abnormal breathing (col. 3, lines 49-57: snore sound source).

Re Claim 17, Raviv discloses the system of claim 16, wherein the computational module further comprises: a communicating module (fig. 4b: 48 & 50a-50c; col. 10, line 56 through col. 11, line 6) configured such that, if the screening module detects a health condition (col. 3, lines 49-57: snore sound source), the communicating module

communicates the detection of a health condition (col. 10, line 56 through col. 11, line 6), and wherein the communicating module comprises an acoustic mechanism (col. 10, line 56 through col. 11, line 6: ultrasonic sensor).

Claim 18 has been analyzed and rejected according to claim 1.

Re Claim 19, Raviv discloses the method of claim 18, further comprising training an algorithm to provide the adaptive filtering function (col. 3, lines 49-57; col. 4, lines 53-59).

Claim 20 has been analyzed and rejected according to claim 4.

Re Claim 21, Raviv discloses the method of claim 20, further comprising obtaining a second signal using a training system comprising at least one microphone (col. 4, lines 53-59), the training system being at least one of: head-wearable device and positionable at desired location of cancellation (col. 4, lines 53-59).

Re Claim 22, Raviv discloses the method of claim 21, further comprising providing a training device comprising a head surrogate comprising a three dimensional object and at least one microphone (col. 4, lines 53-59).

Claim 23 has been analyzed and rejected according to claim 16.

Claim 24 has been analyzed and rejected according to claim 1.

Claim 25 has been analyzed and rejected according to claim 4.

Claim 26 has been analyzed and rejected according to claim 16.

Claim 27 has been analyzed and rejected according to claim 14.

Re Claim 28, Raviv discloses the system of claim 27, wherein the parametric speaker produces the canceling sound with an interaction between two or more ultrasonic signals (fig. 4b: 42, 32, 40; col. 10, line 56 through col. 11, line 6).

Re Claim 29, Raviv discloses the system of claim 27, wherein the parametric speaker produces the canceling sound by nonlinear interaction of an ultrasonic signal with air (fig. 4b: 42, 32, 40; col. 10, line 56 through col. 11, line 6; parametric speakers are nonlinear).

Re Claim 30, Raviv discloses the system of claim 27, further comprising: a computational module in communication with the microphone and the parametric speaker (fig. 4b: 48 & 42, 32, 40; col. 10, line 56 through col. 11, line 6), the computational module configured to receive a signal from the microphone (fig. 4b: 18, 48 & 50a-50c; col. 10, line 56 through col. 11, line 6), identify a cancellation signal using a predetermined adaptive filtering function responsive to an acoustic environment of the cancellation location (fig. 1: 25; col. 3, lines 49-57); and transmit a cancellation signal for producing the canceling sound to the parametric speaker (fig. 1: 25 & 32; col. 3, lines 49-57).

Claim 31 has been analyzed and rejected according to claim 14.

Re Claim 32, Raviv discloses the method of claim 31, wherein transmitting a canceling signal further comprises transmitting a plurality of ultrasonic signals wherein the canceling signal is formed from the interaction of the plurality of ultrasonic signals (col. 10, line 56 through col. 11, line 6).

Claim 33 has been analyzed and rejected according to claim 29.

Re Claim 34, Raviv discloses the method in claim 31 wherein the canceling signal is formed from an interaction between a plurality of ultrasonic signals that creates a difference signal among the ultrasonic signals at the cancellation location (col. 11, lines 7-12; col. 11, lines 21-32).

Re Claim 35, Raviv discloses the method in claim 31 wherein the ultrasonic signal comprises a carrier frequency component and a modulation component and nonlinear interaction between the carrier frequency component and the modulation component in air creates a cancellation sound by demodulation of the ultrasonic signal that is in a generally audible frequency range along the propagation path of the ultrasonic signal (col. 10, line 56 through col. 11, line 6:ultrasonic speakers are nonlinear; col. 12, lines 8-25).

Claim 36 has been analyzed and rejected according to claim 13.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Raviv, US Patent 5,444,786 as applied to claim 1 above, in view of Parkins, US Patent 6,665,410 B1.

Re Claim 3, Raviv discloses the system of claim 1, but fails to disclose further comprising a temperature sensor in communication with the computational module, wherein the predetermined adaptive filtering function is responsive to the temperature of the acoustic environment. However, Parkins does (col. 4, lines 35-49).

Taking the combined teachings of Raviv and Parkins as a whole, one skilled in the art would have found it obvious to modify the system of Raviv with further comprising a temperature sensor in communication with the computational module, wherein the predetermined adaptive filtering function is responsive to the temperature of the acoustic environment as taught in Parkins (col. 4, lines 35-49) to compensate for the change in temperature & humidity in a given space.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Raviv, US Patent 5,444,786 as applied to claim 1 above, in view of Raviv's admitted prior art, US Patent 6,665,410 B1 (hereinafter referred to as RAAPA; col. 2, lines 4-14). (This reference is cited in IDS filed 3/18/2005)

Art Unit: 2615

Re Claim 7, Raviv discloses the system in claim 1, but fails to disclose wherein the source microphone comprises a plurality of source microphones. However, RAAPA does (*col. 2, lines 4-14*).

Taking the combined teachings of Raviv and RAAPA as a whole, one skilled in the art would have found it obvious to modify the system of Raviv with wherein the source microphone comprises a plurality of source microphones as taught in RAAPA (*col. 2, lines 4-14*) so that the sound source signal better facilitates cancellation.

Contact

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George C. Monikang whose telephone number is 571-270-1190. The examiner can normally be reached on M-F. alt Fri. Off 7:30am-5:00pm (est).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chin Vivian can be reached on 571-272-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
